

Rennes, May 12th 2015

Mr. XU Hong successfully went through the highly selective process of the Erasmus Mundus Master MaMaSELF (Master in Materials Science Exploring Large Scale Facilities). He registered at Université de Rennes 1 for his first year and will go to Ludwig Maximilians Universität München for his 4th semester. I personally know him as MaMaSELF coordinator and as a teacher in Crystallography and Phase transition. Mr XU Hong is an excellent student, strongly motivated showing high interest and skills in fundamental and experimental science. He has been accepted for internship enrollment at a latest generation of very intense light source, the XFEL (X-ray Free Electron Laser) in Hamburg.

How fast he improved is French also impressed me a lot. I strongly recommend Mr XU Hong for an Erasmus grant.

Prof. Philippe Rabiller

MaMaSELF master coordinator
